Merry May Greetings to Research Resource Colleagues!

The AOTF Research Priorities are providing us with an important roadmap to advance the science of occupational therapy to support people’s full participation in meaningful life activities. We are already seeing the potential for these priorities to build scientific networks, guide evidence-based practice, and expand financial support for our research initiatives:

- Safety and injury prevention in home, clinical and community settings
- Health behaviors to prevent and manage chronic conditions
- Functional cognition
- Technology and environmental supports in home and community
- Development and transitions for individuals and families
- Emotional and physiological influences
- Family and caregiver needs
- Health care experience: access, care coordination, utilization

In the February issue of Research Resources, we highlighted resources for Safety and Injury Prevention in Home, Clinical, and Community Settings. This month we examine Health Behaviors to Prevent and Manage Chronic Conditions and provide a sample resources for our subscribers who are interested in this research priority. The Centers for Disease Control and Prevention (CDC) reports that chronic disease is the leading cause of disability and is estimated to account for over 85% of U.S. health care costs. Approximately 1 in 2 adults have at least one chronic condition with heart disease, stroke, cancer, diabetes, obesity, and arthritis among the most common chronic diseases. A 2014 Lancet article reported that prevention programs at both the individual and population level are needed to track trends and progress, develop healthy environments, design health care system interventions, and connect clinical and community services. A CDC Fact Sheet emphasizes the self-management and chronic disease management programs are also important to address the symptoms of chronic conditions, increase confidence in skills, and improve quality of life.

We might define health behaviors as the "doing of everyday activities that support well-being", including physical activity, medication...
Management, and healthy eating. Occupational therapy seeks to understand the preventative and protective function of daily activities in promoting and maintaining health. Prevention of chronic conditions requires adoption and maintenance of daily habits and routines that promote health. Making changes in health behaviors requires strategies that address both biomedical and sociocultural factors. Management of chronic conditions requires extensive knowledge of how symptoms influence the ability to perform everyday activities and the habits, routines, and environmental supports that may be used to maintain health and quality of life.

We invite our readers to submit research opportunities to our communications associate, Helene Ross for publication in the next issue of Research Resources. As always, we thank you for the news alerts you share with us, your ideas on ways we can improve this monthly newsletter, and your financial support of AOTF.

Warm regards,

Julie D. Bass, PhD, OTR/L, FAOTA
Associate Director, Institute for the Study of Occupation and Health
Director of Research

Health Behaviors to Prevent and Manage Chronic Conditions

A Sample of Funded Research

Janet Poole
Project: Taking Charge of Systemic Sclerosis: Improving Patient Outcomes Through Self-Management
Funding: Patient-Centered Outcomes Research Institute

Elizabeth Pyatek
Project: Diabetes Self-Management Lifestyle Intervention for Urban Minority Young Adults
Funding: National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

Linda Tickle-Degnen
Project: Emergence and Evolution of Social Self-management of Parkinson's Disease
Funding: National Institute of Nursing Research (NINR)

A Research Agenda for Chronic Disease Research

Abstract
Background. To meet the needs of adults with chronic diseases, Canadian health care is moving toward more interdisciplinary, collaborative practice. There is limited high-quality evidence to support practice in this area. Occupational therapists can play a significant role in this area of practice and research. Purpose. To develop an agenda of priority areas within collaborative chronic disease research to which occupational therapy can make a contribution.

Methods. The project involved literature and Internet review, a consensus meeting with a range of stakeholders, a survey of occupational therapists, and synthesis of findings to create a research agenda. Findings. An interdisciplinary and intersectoral group of stakeholders identified seven main priority areas. One priority is specific to occupational therapy while the remaining six cross disciplines.

Implications. The research agenda can support funding applications and encourage interdisciplinary research collaboration to ultimately produce research evidence that can benefit people with chronic diseases.

Research Agenda Priority Areas:
1. Role of occupational therapy
2. Participation outcomes
3. Continuum of care, life course, and disease course
4. Primary care and community
5. Co-morbidities
6. Social inequities
7. Population-based interventions

Grants and Funding Opportunities

2016 HealthSouth Call for Therapy Grant Applications

This grant's objective is to support research efforts that investigate the impact and/or effectiveness of therapy services within the inpatient rehabilitation facility post-acute care setting. Grant applications must be postmarked June 30, 2016.

List of potential topics:

- Efficacy of physical, occupational, or speech therapy assessments or intervention
- Impact of modes or intensity of therapies on patient outcomes and experience
- Impact of therapy assessments or interventions on outcomes or experience
- Prevention or control of rehabilitation-related conditions
- Patient and caregiver education programming impact or outcomes
- Impact of IRF therapy services on the continuum of care throughout a patient's medical event, including rehospitalization and post-acute care
- Implementation research aimed at the study of methods to implement research findings.

Grant Opportunities from the Robert Woods Johnson Foundation (RWJ)

State Health Access Reform Evaluation (SHARE)

This solicitation seeks to fund timely policy-relevant studies with strong empirical designs that will inform policy and health reform implementation. Eligible studies may be of a single state, groups of states, or national analyses that use state-level data. RWJ is primarily interested in timely studies which have policy relevance.

June 1, 2016 (3:00 p.m. ET) Deadline for proposals.

Global Ideas for U.S. Solutions

RWJ is looking for ideas to help build a Culture of Health in the United States, where everyone has the opportunity to live healthier lives, no matter who they are, where they live, or how much money they make.

They will support grants from $50,000 up to $250,000 (USD), for up to 18 months. The total number of grants is undetermined.

May 31, 2016 (3 p.m. ET) Deadline for receipt of brief proposals.

Healthy Eating Research: Building Evidence to Prevent Childhood Obesity--Round 10

This national program supports research on environmental and policy strategies with strong potential to promote healthy eating among children to prevent childhood obesity, especially among groups at highest risk for obesity: black, Latino, American Indian, Asian/Pacific Islander, and children who live in lower-income communities (urban, suburban, and/or rural). Findings are expected to advance RWJF's efforts to help all children achieve a healthy weight, promote health equity, and build a Culture of Health.

Approximately $2.6 million will be awarded.

May 11, 2016 (3:00 p.m. ET) Concept papers due in RWJF Online System.

US Department of Health and Human Services Grants

Search the grants.gov website for up to date information on grants that are available.

Doctoral, Post-Doctoral and Research Training Opportunities
Comprehensive Evaluation, Intervention, and Biomechanics of the Hemiplegic Upper Limb
The Ohio State University Medical Center, Columbus, Ohio, September 17, 2016.

Highlights Include:
- Evidence-based treatments for the hemiplegic shoulder
- Anatomical and biomechanical considerations for treatment
- Patient education tools
- Assessment techniques

USC's PhD Program in Occupational Science
The Musculoskeletal Sonography and Occupational Performance (MSOP) Laboratory in the Mrs. T.H. Chan Division of Occupational Science and Occupational Therapy at the University of Southern California (USC) is seeking a qualified individual interested in completing a PhD in Occupational Science. The USC MSOP is currently conducting a CDC-funded study (R01-OH010665) and other research that aims to enhance the assessment, workplace prevention and clinical rehabilitation of upper extremity musculoskeletal disorders using sonographic imaging, ergonomics, mind-body interventions and other techniques.

Individuals interested in a position in the USC MSOP Lab should submit a CV and letter of interest to Assistant Professor Dr. Shawn Roll. Individuals interested in learning more about the PhD program or other PhD student openings should contact Director of Admissions Dr. Liz Carley.

PhD Program in Health and Rehabilitation Sciences at The Ohio State University
The Child & Adolescent Health, Rehabilitation, & Evaluation (CAHRE) Lab at The Ohio State University is seeking exceptional, experienced pediatric occupational therapists that are interested in completing a PhD in Health and Rehabilitation Sciences. They are currently conducting two NIH-funded RCTs of Pediatric Constraint-Induced Movement Therapy (PCIMT; R01-HD0683 & R01-HD074574) and are looking for pediatric practitioners. Students are fully funded and receive: 1) tuition, 2) stipend, and 3) health insurance. Interested therapists should submit a CV and letter of interest to Drs. Andrew Persch or Amy Darragh.

News and Other Resources

From Big Data to Big Profits" Webinar
This Harvard Business Review webinar featured Kellogg School of Management professor Russell Walker, author of From Big Data to Big Profits: Success with Data and Analytics?

New Reports and Workshop Summaries from the Institute of Medicine (IOM)
Envisioning the Future of Health Professional Education: Workshop Summary (2016)
In April 2015, the IOM convened a public workshop to explore recent shifts in the health and health care industry and their implications for health professional education (HPE) and workforce learning. This study
serves as a follow-up to the 2009 Lancet Commission report on health professions education for the 21st century and seeks to expand the report's messages beyond medicine, nursing, and public health.

**A Framework for Educating Health Professionals to Address the Social Determinants of Health (SDH)**
An expert committee of the National Academies of Sciences, Engineering, and Medicine developed a high-level framework for educating health professionals to address the SDH. The committee's framework aligns education, health, and other sectors to better meet local needs in partnership with communities.

**Policy and Research Needs to Maximize Independence and Support Community Living: Workshop Summary**
This workshop explored the policies and research needed to support community living and maximizing independence of people with disabilities and older adults.

**Meeting the Dietary Needs of Older Adults: Workshop in Brief**
This workshop examined factors in the physical, social, and cultural environment that affect the ability of older adults to meet their daily dietary needs. Organized by session, this workshop in brief highlights key points made by individual speakers during the workshop presentations and discussion.

**Obesity in the Early Childhood Years: State of the Science and Implementation of Promising Solutions: Workshop in Brief**
The workshop examined what is currently known about the prevalence of obesity in young children, its trends over time, and its persistence into later childhood, adolescence, and adulthood; epigenetic factors related to risk of early childhood obesity; and the development of taste and flavor preferences in the first few years of life. The workshop explored recent developments in the science of modifiable protective and risk factors associated with obesity through age 5, including a mother's pre-pregnancy weight and weight gain during pregnancy; smoking during pregnancy; breastfeeding; complementary feeding, responsive parenting; and sleep, activity, and sedentary behavior in young children.

**Patient-Centered Outcomes Research Institute (PCORI) Funding Announcements**
On February 1st, [PCORI posted five funding announcements](https://www.pcori.org/education/ announce/news) for Cycle 1 of 2016.

- Improving Methods for Conducting Patient-Centered Outcomes Research - Cycle 1 2016
- Communication and Dissemination Research - Cycle 1 2016
- Improving Healthcare Systems - Cycle 1 2016
- Addressing Disparities - Cycle 1 2016
- Assessment of Prevention, Diagnosis, and Treatment Options - Cycle 1 2016
- Limited PCORI Funding Announcement: Dissemination and Implementation of PCORI Funded Patient-Centered Outcomes Research Results and Products in Real World Settings - Cycle 1 2016

**Assessing the Impact of Applications of Digital Health Records (DHRs) on Alzheimer’s Disease (AD) Research: Workshop Summary**
On July 20, 2015, the IOM's Forum on Neuroscience and Nervous System Disorders held a public session at
the 2015 Alzheimer's Association International Conference in Washington, DC, to explore how DHRs may be used to help improve clinical trial design and methodology for AD research. While there are a number of potential uses of DHRs, speakers discussed some of the currently available DHR databases that are being mined to better understand the progression of AD and design more effective clinical trials. Click here to read workshop summary.

Free Webinars on TBI and Psychological Health
The Defense Centers of Excellence for Psychological Health and Traumatic Brain Injury (DCoE) hosts free monthly webinars on topics related to psychological health and TBI. See their website for more information and an archive of past webinar. Next webinar:

Conferences and Calls for Papers

WCNR 2016: 9th World Congress for NeuroRehabilitation (May 10-13, 2016, Philadelphia, Pennsylvania)
From Science to Society, the theme that has been chosen for this Congress, will cover both inspiring innovations in neurorehabilitation and their societal impacts.

Society for Disability Studies (June 8-11, 2016, Phoenix, Arizona)
Theme: Disability in the Public Sphere.

National Alliance on Mental Illness (NAMI) (July 6-9, 2016, Denver, Colorado)
The national NAMI conference will feature researchers and clinicians providing information and tools to advance and sustain recovery from mental illness as well as people living with a mental illness and their families with their own important perspectives on recovery.

Rehabilitation Engineering and Assistive Technology Society of North American (RESNA) Annual Conference (July 10-14, 2016, Arlington, Virginia)
The theme of this year's conference is: Promoting Access to Assistive Technology

International Biophilia Society (IBRA) (July 18-19, 2016, Geneva, Switzerland)
IBRA advances research in rehabilitation medicine. The term "biophilia" represents people's regaining body function with activating works of the brain by the latent powers which we have in the brain.

Alzheimer's Association International Congress (AAIC) (July 22-28, 2016, Toronto, Ontario)
This conference will bring together international investigators, clinicians and care providers to share the latest study results, theories and discoveries in dementia science. There will be a track focused on evidence-based approaches to dementia care.
Developing topic submission deadline: April 18, 2016.

International Association for Child and Adolescent Psychiatry and Allied Professions (IACAPAP). (September 18-22, 2016. Calgary, Alberta)
Conference theme: Fighting Stigma, Promoting Resiliency and Positive Mental Health.

5th Annual Summer Research Institute: Basic and Advanced Behavioral Intervention Research (June 6-8, 2016 and June 9-10, 2016, Baltimore, Maryland)  
Apply Today at nursing.jhu.edu/aginginstitute. Early Bird Special, Scholarships, and Fellowships are available.

Alzheimer’s Association International Conference (AAIC) (July 24-27, 2016, Toronto)  
A Global Forum to Advance Dementia Science

Health care professionals and academics are invited to submit abstracts. Abstract topics for oral presentation may refer to any topic related to advances in diagnostics and treatments of psychological health and/or traumatic brain injury in military health care.

Society for the Study of Occupation/Canadian Society of Occupational Scientists  
(September 28-October 1, 2016, Portland, Maine)  
Navigating the Seas of Change: Diversity of Occupation

Southwest Conference on Disability (October 5-7, 2016, Albuquerque, New Mexico)  
The theme for 2016 is Reducing Disparities For People With Disabilities Through Systems Change. The 2016 Southwest Conference on Disability seeks contributions that focus on reducing or eliminating disparities through systems change in:

- Improving Access To Health Care And Human Service
- Data to Drive Policy and Practice
- Workforce
- Inclusion Of People With Disabilities in Mainstream Programs And Services
- Emergency Preparedness for People With Disabilities

Deadline for submissions: Friday, May 6, 2016.

American Public Health Association (APHA) Annual conference (October 29-November 2, 2016, Denver, Colorado)  
The theme of this year's conference is Creating the Healthiest Nation: Ensuring the Right to Health.

ACRM Annual Conference (October 30, 2016-November 4, 2016, Chicago, Illinois)  
The theme of the American Congress of Rehabilitation Medicine's 93rd Annual Conference is Progress in Rehabilitation Research: Translation to Clinical Practice.

American College of Rheumatology Annual Conference (November 11-16, 2016, Washington, DC)  
For more information.

Society for Neuroscience Annual Conference (November 12-16, 2016, San Diego, California)  
For more information, Abstract Submission: April 14-May 5, 2016.
A Sample of Occupational Therapy Research on Health Behaviors to Prevent and Manage Chronic Conditions

Pyatak, EA, Florindez, D, Peters, AL & Weigensberg, MJ. (2014). "We are all gonna get diabetic these days": the impact of a living legacy of type 2 diabetes on Hispanic young adults' diabetes care. Diabetes Educator, 40, 648-658.

AOTF is a 501(c)(3) dedicated to advancing the science of occupational therapy to support people's full participation in meaningful life activities. Gifts to AOTF help us make a real difference through:

- Scholarships
- Research support including the Intervention Research Grants program
- Maintenance of the largest collection of occupational therapy resources in the country, the Wilma L. West Library.

AOTF is concerned about privacy and will only send Research Resources to those individuals who wish to receive it. If you no longer wish to receive Research Resources, or if you feel that you received this newsletter in error, please use the SafeUnsubscribe link at the bottom of this email. AOTF does not sell email addresses to other parties.
