AOTF Health Services Research Grant
2020-2021 Request For Application

The AOTF Health Services Research Grant (HSR) is targeted to principal investigators who do not currently have substantial extramural research awards as an independent principal investigator (e.g., NIH, R01, PCORI, Research Program Project Grant, Veterans Administration Merit Award, and Field-Initiated Project). Typically, the principal investigator (PI) will have a funding history associated with early stage, emerging, or early midcareer investigators that may include small research grants and training-related or mentored career awards. The PI must also have a commitment from an experienced research mentor who has an established record of substantial extramural grant funding, peer-reviewed publications, and supervision and mentoring of researchers.

Contact AOTF (research@aotf.org) if you have any questions.

I. About the 2020-2021 Funding Priorities for the Health Services Research grant
II. About the Approaches: Pilot/Feasibility/Planning Grant Descriptions
III. About the Available Awards
IV. About the Eligibility Criteria for Investigators
V. About the Process and Timeline for 2020-2021 Applications
VI. About the Components of the 2020-2021 Letter of Intent and Application
VII. About the Key Review Criteria for 2020-2021 Applications

Grant Eligibility Form and Letter of Intent will open August 31st, 2020.

I. ABOUT THE 2020-2021 FUNDING PRIORITIES FOR HEALTH SERVICES RESEARCH

A. What are the research priorities for the 2020-2021 funding cycle?

The AOTF Research Priorities were used to establish the funding priorities.

The AOTF Research Priorities:

- Health behaviors to prevent and manage chronic conditions
- Functional cognition
- Safety and injury prevention in home, clinical and community settings
- Technology and environmental supports in home and community
- Development and transitions for individuals and families
- Emotional and physiological influences
- Family and caregiver needs
- Health care experience: access, care coordination, utilization
- Use of and establishment of Common Data Elements and Data

B. What are the objectives of the AOTF Health Services Research Grant?

HSR grant objectives include but are not limited to:

- Examine how OT services are organized and delivered within the healthcare system
- Explore client access to OT services
- Determine how to optimize client provider behaviors with evidence-based tools to foster delivery of high quality care
- Study the impact of polices on OT delivery and quality.
II. ABOUT THE APPROACHES: PILOT/FEASIBILITY DESCRIPTIONS

A. Approaches that lay the necessary groundwork for larger studies include:

- **Pilot studies**

  “A Pilot Study is a version of the main study that is run in miniature to test whether the components of the main study can all work together. It is focused on the processes of the main study, for example to ensure recruitment, randomisation, treatment, and follow-up assessments all run smoothly. It will therefore resemble the main study in many respects. In some cases this will be the first phase of the substantive study and data from the pilot phase may contribute to the final analysis; this can be referred to as an internal pilot. Alternatively at the end of the pilot study the data may be analysed and set aside, a so-called external pilot.” (p. 5)

  Pilot studies are characterized by:

  - “rigorous methodological components like sample size estimation, randomization and control group selection” (p. 5)
  - an explicit purpose (e.g., “to test a new procedure in preparation for a clinical trial”) and “the criteria which lead to further studies being abandoned. “ (p. 6)
  - reporting of results are “interpreted with caution” (p. 6) or as “inconclusive, with the intention of conducting a further, larger study” (p. 5)
  - results that “provide information to enable a sample size calculation in a subsequent main study.” (p. 6)

- **Feasibility studies**

  “Feasibility Studies are pieces of research done before a main study. They are used to estimate important parameters that are needed to design the main study. For instance:

  - standard deviation of the outcome measure, which is needed in some cases to estimate sample size,
  - willingness of participants to be randomised,
  - willingness of clinicians to recruit participants,
  - number of eligible patients,
  - characteristics of the proposed outcome measure and in some cases feasibility studies might involve designing a suitable outcome measure,
  - follow-up rates, response rates to questionnaires, adherence/compliance rates, ICCs in cluster trials, etc.

  Feasibility studies for randomised controlled trials may not themselves be randomised. Crucially, feasibility studies do not evaluate the outcome of interest; that is left to the main study…. If a feasibility study is a small randomised controlled trial, it need not have a primary outcome and the usual sort of power calculation is not normally undertaken. Instead the sample size should be adequate to estimate the critical parameters (e.g. recruitment rate) to the necessary degree of precision.” (p. 5)

  In general, feasibility studies are "conducted with more flexible methodology compared to those labeled 'pilot'. For example, the term 'feasibility' has been used for large scale studies such as a screening programme applied at a population level to determine the initial feasibility of the programme." (p. 5)

III. ABOUT THE AVAILABLE AWARDS FOR THIS HEALTH SCIENCES RESEARCH INITIATIVE

**HSR Pilot Study Option #1:**
Includes pilot studies examining an occupational therapy-related question using data from administrative or healthcare dataset(s) (e.g. Medicare Administrative data, Health System Electronic Medical records).

Funding Required: $100,000 per grant.

Funding may be used to cover full-time equivalent (FTE) for Principal Investigator and other key personnel, data acquisition costs, software for data analysis, consultant fees, and dissemination activities. These studies may run up to 2 years given the time necessary to purchase administrative data, clean the data, and conduct analysis before manuscript development.

**HSR Pilot Study Option #2:**
Includes pilot studies examining a rehabilitation question using data from publicly available datasets (e.g., Health and Retirement Survey, National Health and Aging Trends Study, National Health and Nutrition Examination Survey, LTCFocus).

Funding Required: $50,000 per grant.

Funding may be used to cover full-time equivalent (FTE) for Principal Investigator and other key personnel for work and statistical consulting. Data sets for these studies are free and thus would not require purchasing of data or paying for health systems IT personal. These studies may run up to 1 year.

Funds will be released on a payment schedule identified by AOTF. The grant cycle will begin on July 1 pending IRB receipt (if required) by AOTF.

IV. ABOUT THE ELIGIBILITY CRITERIA FOR INVESTIGATORS

A. What are the eligibility criteria for the principal investigator (PI)?

General Personal Criteria

- The PI has a terminal research degree or doctorate with advanced research training (such as completion of a research fellowship).
- The PI is employed by a U.S. domestic, public or private, non-profit organization/institution that is eligible to receive Foundation research grants and will provide assurance of its accountability and support for the project.
- The PI is a U.S. citizen or non-citizen national of the United States OR admitted for permanent residence OR applied for permanent residence. (For non-citizens, the applicant organization must have policies in place to determine whether residence status or visa status will allow completion of the research.)
- The PI has a full-time faculty position appointment or an equivalent research position. (Please note: Post-Doctorate Fellowship Researchers are not eligible to apply).
- The PI is a credentialed OT or if not, an OT has a major role in the research.
Research and Proposed Project Criteria

• The PI has a track record of achievements and career goals related to the proposed project that includes peer-reviewed publications.
• The PI does not currently have any substantial extramural research awards (e.g. RO1, PCORI, Research Program Project Grant, Veterans Administration Merit Award, Field-Initiated Project). Typically, the PI will have a funding history associated with early stage, emerging, or early midcareer investigators that may include small research grants and training-related or mentored career awards.
• The PI has a commitment from an experienced research mentor who has an established record of substantial extramural grant funding, peer-reviewed publications and supervision and research mentoring experience.
• The PI does not have any conflicts of interest. The PI is not:
  o An AOTF or AOTA board or staff member
  o An AOTF Scientific Advisory Council member
  o A board or staff member of an IRG sponsor

V. ABOUT THE PROCESS AND TIMELINE FOR 2020-2021 APPLICATIONS

A. What is the process for submitting an application for 2020-2021 Health Sciences Research funding?

Applying for the grant involves several steps:

• The principal investigator reviews the eligibility criteria and completes the online Grant Eligibility Form. The online site for the AOTF Health Sciences Research grant opens August 31, 2020.
• If the principal investigator meets all eligibility criteria on the online Grant Eligibility Form, immediate access will be given to the Letter of Intent (LOI). The LOI must be submitted by September 30, 2020 11:59 p.m. PST. The LOI is reviewed by AOTF. If the PI meets all eligibility criteria and the LOI is accepted by AOTF, applicants will be provided with a link to the application. Principal investigators who are granted permission to submit an application will be notified by October 15, 2020.
• Application deadline: December 15, 2020 11:59 a.m. PST.

Applicants are responsible for all deadlines. Deadline extensions will NOT be granted.

B. What is the timeline for the 2020-2021 Health Sciences Research grant project?

May
• May 1st -- RFA and award guidelines are posted on AOTF website. Review the research priorities, objectives, approaches, and eligibility criteria found in the RFA.
• Review award guidelines.
• Develop the initial framework for a Letter of Intent and applications

August
• August 31st -- Online submission site for Letter of Intent opens.

September
• September 30th -- Letter of Intent deadline 11:59 p.m. PST.

October
• October 15th -- Invitations to submit an Application are extended to principal investigators who meet eligibility criteria and whose LOI is accepted by AOTF. Invites can begin application.

December
• December 15th -- Application deadline 11:59 p.m. PST.

March 2021
• Summary statements and award notifications are sent to applicants

VI. ABOUT THE COMPONENTS OF THE 2020-2021 LETTER OF INTENT AND APPLICATION

A. What are the components of the Letter of Intent (LOI)?
   • Principal investigator: personal information and biosketch
   • Information about the applicant organization
   • If PI is not an OT, include OT biosketch.
   • Research mentor: personal information, letter of commitment including mentoring plan, biosketch, and mentor training table
   • Short description of the proposed research project including rationale and importance to the rehabilitative sciences field.

B. What are the components of the Application?
   • Principal investigator and project information.
   • Sponsoring institution information.
   • Research Plan with information on:
     o Specific Aims including expected outcome of the study and its impact on the field of rehabilitation.
     o Method.
     o List of databases to be used.
     o Future Implications.
   • Short project summary in lay language.
   • Budget and budget justification.
   • Specific aims.
   • Letters of support.
   • Literature cited.
   • Protection of human subjects plan (if needed).
   • Inclusion of women, minorities, and children.
   • Consortium/contractual/consulting arrangements.
   • IRB approval letter/IACUC approval (if needed for research. If research requires an IRB, grant will not begin until AOTF receives the RB).
   • Human subjects research training certification for key personnel if needed.
   • Appendices.
   • Available resources.
   • Biographical sketches of co-investigators and other key personnel including roles and responsibilities each member of the team.
   • Overview of deliverables.

VII. ABOUT THE KEY REVIEW CRITERIA FOR 2020-2021 APPLICATIONS

A. What are the key review criteria for the 2020-2021 applications?
   • Overall impact score
   • Significance
   • Innovation
   • Approach
   • Environment
   • Investigator(s)
   • Potential for subsequent funding -- lays the necessary groundwork for larger studies and subsequent funding.
• Budget
• Statistical analysis

All AOTF-funded studies must address plans for the inclusion of women and minorities within the application or proposal. Applications and proposals should describe the composition of the proposed study population in terms of sex/gender and racial/ethnic groups, and provide a rationale for selection of such subjects. Any exclusions based on sex/gender or race/ethnicity must include a rationale and justification based on a scientific or ethical basis. Investigators should also plan for appropriate outreach programs and activities to recruit and retain the proposed study population consistent with the purposes of the research project.
