Greetings to Research Resources colleagues:

We are in the midst of the dog days of summer in the Northern Hemisphere! Hope you are staying cool and staying safe as you enjoy your summer occupations. This month, we will provide an update on the NEW AOTF/AOTA Intervention Research Grant Program and information on our featured topic, fall prevention.

AOTF/AOTA Intervention Research Grant Program

We are carefully putting the pieces together for the online application of the AOTF-AOTA Intervention Research Grant. Since it is the first Request for Application (RFA) for this particular initiative, it is requiring substantial planning and the requisite attention to detail! There is a wonderful buzz about this initiative and I have enjoyed responding to the many inquiries about the opportunity. This year, autism spectrum disorders and health issues associated with aging are the two priority areas. These grants are intended to help our researchers and scientists lay the groundwork for larger intervention studies and future funding to address pressing societal needs. The online letter of intent and application will be available in August. If you are a subscriber to Research Resources, you appreciate the importance of intervention research to the future of occupational therapy. To support the research funded by this initiative, use the secure process on the AOTF website and designate Intervention Research Grants.

We believe:

Research + Evidence = Improved Practice.

Fall Prevention for Older Adults

The 2013 Research Resources continues to examine topics of importance for the six occupational therapy practice areas identified during the AOTA
centennial visioning process. This month, research in the practice area of productive aging, particularly fall prevention for older adults will be highlighted.

Recently, I helped a neighbor clean an old bird’s nest out of the gutter on her house. I was thankful as she stabilized the ladder from below while I climbed and positioned myself to safely remove the debris. Every time I climb a ladder I take extra care as I am aware that accidental falls are a major public health problem and I don't want to contribute to these statistics! Prevention of falls has been identified as a priority area, especially for older adults. The Centers for Disease Control and Prevention (CDC) summarizes evidence on falls among older adults (age 65 and older), including:

- One in three older adults falls each year
- Falls are the leading cause of injury-related death for older adults
- In 2010, fall injuries contributed to over $30 billion dollars (adjusted for inflation) in medical costs and hospitalization of over 600,000 older adults.
- Falls account for 9/10 hip fractures and over 1/3 of traumatic brain injuries

There is good news on the horizon though with growing evidence on strategies to reduce the risk of falls in the older adult population. For example, the CDC's Steadi (Stopping Elderly Accidents, Deaths, and Injuries) Tool Kit for health care providers addresses person, environment, and occupation factors and recommends referral to occupational therapy for assessment and/or intervention.

We invite you to survey the sample of publications that were assembled by our staff in the Wilma L. West Library. As always, we welcome your ideas on ways we can improve this monthly newsletter, and we thank you for your support of AOTF.

Stay safe!

Julie D. Bass, PhD, OTR/L, FAOTA
Associate Director, Institute for the Study of Occupation and Health
Director of Research

Resource Notes:
Occupational therapy interventions to prevent falls in older adults

In late 2012, I turned seventy. Still, when adding articles about the elderly to OT SEARCH and scanning them in order to assign subject headings that describe the article's content, I don't usually think they're talking about me. However, the topic for the summer Research Resources, preventing falls in the elderly, shouted out to me. In 2000, at fifty-eight, I walked off a step ladder and broke my left wrist, and at 64, I tripped in a parking lot and fractured a rib. Soon after the second fall, I got myself to a gym and found a trainer. We've worked on strengthening my core, lower extremities and improving my balance. I've had no falls recently, but some of my peers have.

Unfortunately, in some instances, falls cause lasting limitations or seem to be the beginning of a downward spiral. Health care professionals recognize that preventing falls in the elderly is a national priority. Occupational therapy methods research reports are especially encouraged. For more information on publishing in this peer-reviewed journal, see its website.

OTJR: Occupation, Participation and Health: Summer

OTJR: Occupation, Participation and Health, published quarterly by the American Occupational Therapy Foundation, Inc., offers original research articles of professional interest to the practicing occupational therapist with a focus on occupation and fostering interdisciplinary research. Online Resources

Project Intersect: Addressing Health Disparities at the Intersection of Race, Ethnicity and Disability
This national conference was held April 25-26, 2013; it brought together more than 200 researchers and advocates in both the disability field and the racial and ethnic health disparities field. The presentations are now posted on their web site.

PTSD Reference Tools
The PTSD reference tools give medical and behavioral health providers insights and best practices for treating patients experiencing PTSD and related post-traumatic stress conditions, as well as information to educate both the patient and their family about PTSD symptoms and treatment options. The products support comprehensive, evidence-based care that complies with the "VA/DoD Clinical Practice Guideline for the Management of Post-traumatic Stress.

Educating the Student Body: Taking Physical Activity and Physical Education to School
This consensus report from the IOM examines the status of physical activity and physical education efforts in schools, how physical activity and fitness affect health outcomes, and what can be done to help schools get students to become more active.

Disability and Health Data System (DHDS)
DHDS, CDC’s innovative disability and health data tool, uses data from the Behavioral Risk Factor Surveillance System (BRFSS) to identify disparities in health between adults with and without disabilities. Find data on a range of health indicators for your state, and compare the health of adults with disabilities and adults without disabilities.

Funding Opportunities
AOTF/AOTA Intervention Grant Program
These grants will fund innovative innovations to build bridges between research-evidence-practice in aging and autism. Letter of Intent will be available August 1, 2013 and will be due August 30, 2013.

Disseminating Patient Centered Outcomes Research To Improve Healthcare Delivery (R18)
Activity Code R18 Research Demonstration and Disseminations Projects Funding Opportunity Announcement (FOA) Number RFA-HS-14-003
The purpose of this FOA is to leverage the capacities of existing broad-based networks of providers and other key stakeholders to disseminate and
implement existing evidence for improving the quality of care delivery.

**OT: History in Focus**

**Remembering Historian Robert K. Bing**

Many scholars and historians in occupational therapy are familiar with the late Dr. Robert K. Bing, who had a passion for occupational therapy history. Robert Kendall Bing died a decade ago in May, 2003. He was a distinguished educator, dean, scholar and leader in occupational therapy. Active with AOTA throughout his professional career, Bing served as president of the American Occupational Therapy Association from 1983-1986. In 1981, he became the first man to give the Eleanor Clark Slagle lectureship, and true to form, used the lecture to highlight the historical richness of occupational therapy.

He earned his doctorate from the University of Maryland in 1961 after completing a doctoral dissertation that stands as an important contribution to the archival history of occupational therapy. While in Maryland pursuing graduate studies, he befriended Dr. William Rush Dunton, Jr., one of the original founders of the occupational therapy profession, and interviewed him extensively just a few years before his death to provide a first hand account of occupational therapy's early years. This work is available in the Wilma L. West Library maintained by AOTF. Scholars can find more information about Dr. Bing in the memoriam published about his life in 2003.

**Conference Announcements**

The Disability Experience: State of the Arts in Research, Scholarship and the Arts. (October 31-November 1, 2013, Pittsburgh, Pennsylvania)

Sponsored by the Students for Disability Advocacy at the University of Pittsburgh, this conference will focus on panel presentations by students with faculty respondents in order to provide discourse, networking opportunities and create a dialogue between students and faculty.

31st Annual Closing the Gap Conference (October 9-11, 2013, Minneapolis, Minnesota)

This year’s conference builds on a tradition of providing a comprehensive examination of the most current uses of technology by persons with disabilities and the professionals who work with them. Preconference Workshops: Monday and Tuesday, October 7-8, 2013.

Tenth World Congress on Brain Injury (March 19 - 22, 2014, San Francisco, California)

This is the largest gathering of international professionals working in the field of brain injury. The abstract submission deadline is October 11, 2013.

The 2013 Southwest Conference on Disability (October 8-11, 2013, Albuquerque, New Mexico)

The main theme of this conference is: The Rehabilitation Act At 40: Promises Kept, Promises Still To Keep.

3rd Global Conference Making Sense Of: Chronicity (Sept 23-25, 2013, Oxford, United Kingdom)

The apparent increase in and diversity of chronic conditions calls for better understandings of the spaces between
health and illness that chronic patients occupy, often for most of their lives and raises questions not just about those that suffer, but also about those that care for them, available treatments and care, and social inclusiveness.

4th Brain Development and Learning: Making Sense of the Science Conference (July 24-28, 2013, Vancouver, British Columbia)
An interdisciplinary conference devoted to improving children's lives by highlighting innovative programs and by making the newest research and applicable to those who work with children.

12th European AAATE Conference (Association for the Advancement of Assistive Technology in Europe) Conference (September 19-22, 2013, Vilamoura, Portugal)
Presentations are sought which will contribute to the advancement of assistive technology, not only in technological areas, but in all the fields closely related with this domain of knowledge: education and training, service provision, research, industry, legislation.

The Cochrane Collaboration's 2013 Colloquium (September 19-23, 2013, Québec City, Québec)
The focus of this year's colloquium: Better Knowledge for Better Health will focus on evidence that informs health care decisions at every level -- from patient to practitioner, to institutional or government policy maker. Founded in 1993, The Cochrane Collaboration is the largest global network of scientists, researchers, health policy-makers and consumer advocates involved in the production of systematic reviews of healthcare evidence.

16th International Congress of World Federation of Occupational Therapists (June 18-21, 2014, Yokohama, Japan)
Presented in collaboration with the 48th Japanese OT Congress & Expo, the WFOT Congress themes are: disaster preparedness, response and recovery, inter-professional collaboration and the role of OT, wisdom: learning from the past, tradition for the future, innovations and challenges in OT, education and research: meeting the demands from the field, evidence-based practice and quality of OT, the nature of human occupation, community & OT.

AOTA Specialty Conference -- School-System Practitioners (July 26-27, 2013, Minneapolis, Minnesota)
Registration and hotel information will launch May 8, 2013. Speakers have been announced.

AOTA Education Summit (October 4-5, 2013, Atlanta, Georgia)
The summit will cover: pedagogy and instructional design; foundations for OT/OTA education and practice; and capacity building with the profession and academia.

SPD: Strategies, Science and Success (October 25-26, 2013, Charlotte, North Carolina)
This conference by the Sensory Processing Disorder Foundation will have separate tracks for both parents and professionals.

5th Annual Health Literacy Research Conference (October 28-29, 2013, Washington, DC)
This interdisciplinary meeting for investigators dedicated to health literacy research is an opportunity to advance the field of health literacy, a method to raise the quality of our research, and an venue for professional development.

About Us
AOTF is a 501(c)3 dedicated to the advancement of research, education, and public awareness of occupational therapy so that all people may participate fully in life regardless of their physical, social, mental, or developmental circumstances.

AOTF is concerned about privacy and will only send Research Resources to those individuals who wish to receive
